

01/19/2020 4:00AM --Junhao Huang

1. merge all the staff of the version end of today.
2. Create User Class
3. Create AI Class
4. Modify the attributes of the DBConnected Class
5. add some comment in the GameManager Class
6. Change the type of cardPile to ArrayList< Card >.
7. Modify the takeCard() method in Player Class
8. Modify the name of isactive() and setactive in Player class. It should be isActive() and setActive()
9. Delete the method: giveCard() in Player Class.
10. Card Class: we need to use Reflection to get the attribute and its value from each instance, this might be hard, but it is worth learning, please have a look.(important)
11. Card Class: There are some method used to find max value in the category (important)
12. Written getSelectedCategoryValue(), findBiggestCategory() method in Card Class.
13. Finish judge draw method, activePlayerSelector() function.

01/19/2020 10:30 AM --Junhao Huang

1. Updated User Selected method: User should selected the number of the category, but not the category name.
2. Finish roundStart() function
3. Doing in showRoundResultFunction
 1. add selectWinner function
 2. add distribute card method

01/20/2020 13:00 PM --Junhao Huang

List the things might be changed.

1. add .gitignore file
 - need to ignore the .classpath and .project because this two file is related to the personal jdk in the PC, if not, it will cause jdk missing when pull the branch.
2. might not connect to DataBase, when drag the card.
3. change to MVC structure.

01/23/2020 01:05 AM --Junhao Huang

1. Separated the Model class

2. Add initializeCard() function which can gain the card from the file "./StarCitizenDeck.txt" Test successfully! and it can acquire 40 cards in total from the file, and print the card in a right way!
3. Modified several function, such as selectCategory() in AI and User.
4. Important change: the card information which is gained from database is now changed, see (1).
5. Warning: write Log function needed.

01/24/2020 01:00 AM --Junhao Huang

1. Finish overall model (will modify if needed) There might some point: how to generate each model; (Contributor needed)
2. Try to add Controller and Listener Challenges: how to actually use it to wait user's input, and then call method.

01/25/2020 04:00 AM --Junhao HUang

1. fixed some bug in Model Part. can select the category correctly
2. generate the controller.
3. the CML mode is now can run, but still some bugs: the card cannot show correctly at each round
4. log function need to be added
5. database connection to be added.

01/25/2020 2:33 PM --Junhao Huang

fixed bug:

1. accidentally select and reset active player at the same time:
Model_RoundManager line:128

fixed: it is commented. (deleted)
2. accidentally pick the card again when select category: Class:
Model_Player line:149

fixed: it is commented (deleted)
3. didn't reset winPlayerList after active player select the category

fixed at : Model_RoundManager line:90
4. the game will throw error when user is out

fixed at: Model_RoundManager line:190~203

Add function

Player now can end game at each time
Add at : Model_GameManager line 40~65

needed:

1. log function need to be added
2. database connection to be added.

01/29 Meeting details:

1. commandLine mode will be completed after finishing log function and database connection.
2. Understand the working step of online mode
3. Confirm that the knowledges of online mode needed: Jax, Html , JavaScripts, CSS
4. Spend one week to master these language.

02/03/2020 1:13 AM --Junhao Huang

Complete log function

1. the log function can be controlled by argument which is -t
2. the log function will be covered when a new game start
3. it recored the total cardpile, each player cardpile at each round, the owned card of each player at each round, the selected category, the round winner, the overall winner.

02/05 Meeting details:

1. divide the task of online mode into three parts: JS, Html, Jax
2. start to write Story card
3. Goes into Sprint 2 --- Online Version

02/05/2020 3.21 P.M. -- Junhao Huang

1. Log function improvement:
the log now can be written following the game is continuing.
add write.flush()
2. Game improvement. The game will not end until user input 3 from the Game menu;
the number: 3 in GameMenu is Exit Game.

02/09/2020 3.03 A.M. -- Junhao Huang

1. our website can get information from backend right now;
the type between client and server is json String type.
Js will have method to convert it into Json object.
2. the game backend part connection is nearly finished,
need Js to show details to the User.
here is the response url:
/toptrumps/gamestart
/toptrumps/gamestart/categoryselect
/toptrumps/gamestart/userCategoryselect
/toptrumps/gamestart/showresult
/toptrumps/gamestart/newround

02/09/2020 2:18 P.M --Junhao Huang

1. in SelectionScreen.ftl line: 22~172
Add the Js function which can get data from backend
2. each will be called when load the page or click the button
see comment

02/11/2020 11:50 P.M --Junhao Huang

1. the online version can simply run.
2. there are many problems need to be solved:
 - (1) Need to show the card pile of each player
 - (2) the png cannot be loaded..
 - (3) the function might need to be simplified
 - (4) the overall structure of html or css might need to be

modified.

(5) the statistical page haven't done yet.

02/14/2020 03:54 A.M -- Junhao Huang

1. Finished the Statistics pages design and JS function.
2. The players' card pile, which have rest numbers of cards, can display on the owner card box.
3. Add the auto-game function when the user is out in the GameScreen.ftl
4. Rename the assets image
5. Add button that user can return to menu
6. Add function that show image of each card
7. The active player will display obviously.
